FOFX 135° Internal & External Corner Joiners

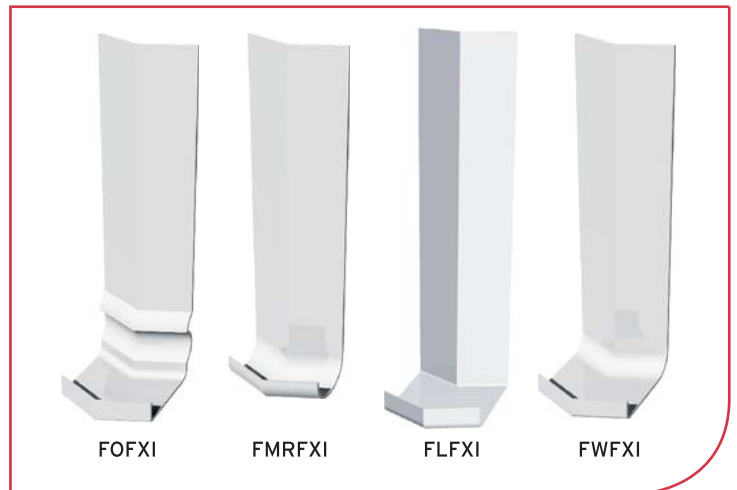

Introducing the new 135° External Corner Joiner from Freefoam

The external corners compliment the entire range of board profiles

Introducing the new 135° Internal Corner Joiner from Freefoam

The Internal corners compliment the entire range of board profiles

In recent years, we have seen a rapid growth in conservatories and extensions to housing, whether newbuild or renovation. This has prompted a demand for irregular angled fascia joints, in addition to the standard 90° angle.

Freefoam's new range of 135° corner joiners allows the Installer to finish each otherwise cumbersome job with elegance and simplicity. Both internal and external angles are catered for, which negates the

need for unsightly mastic, which can lead to discolouration and hence draw attention to an imperfect finish. The joiners are manufactured from a flexible material which allows fitting to a range of angles

close to 135°. This simple yet effective range of products compliments all board profiles and contributes to the installer's efficiency.
